Douglas County Legislative Priorities 2025 DCFPC Recommendations

DRAFT 10/16/2024

Note from staff: I have provided the option to submit legislative recommendations from all DCFPC members and partner liaisons. Below is the list of recommendations received to date. If you or your liaison organization *have* additional recommendations to contribute, please email them to me by October 18th. During our next full council meeting on October 21st, the DCFPC will vote on whether to adopt some or all of these priorities.

DCFPC partner liaisons: Kansas Farm Bureau (KFB), Lawrence-Douglas County Public Health (LDCPH), K-State Extension (KSE), and Douglas County Conservation District (DCCD). **Kansas Food Action Network (KFAN)** 2025 Legislative Priorities are also included on the chart below.

DCFPC individual member recommendations will include the member's initials.

B.S	Maximizing best farming practices for sustainable production. Nationally, we are up to 70% for no till/mulch till (https://www.ers.usda.gov/data-products/chart-gallery/gallery/chart-detail/?chartId=105042). I couldn't easily find what it is for Kansas alone. How do we get the last 30%? As water resources dwindle in W Kansas, what high water use efficiency (WUE) crops and markets can we tap to reduce center pivot reliance and	Water Conservation. We support legislation that promotes the adoption of no-till/mulch till practices to close the remaining 30% gap in sustainable farming, while incentivizing high wateruse efficiency (WUE) crops and markets in Kansas to reduce center pivot reliance and mitigate aquifer depletion.
D.O.	aquifer drydown. We need leadership and legislation.	
B.S	Focused, forward-looking best practices, incentives for research, and regulation on agrivoltaics. These have been rapidly developed for wind energy in KS. We need equally rapid rollout for solar. The solar farms are coming whether legislature likes it or not, as the demand is high and cost is low. Legislation to show how sustainable land use including farming can (or should) be produced under these is needed.	Renewable Energy & Agrivoltaics. We support the rapid development of best practices, research incentives, and regulations for agrivoltaics in Kansas to ensure sustainable land use and farming alongside the inevitable expansion of solar energy.
B.S	Production and use of green ammonia in Kansas. High demand in Kansas, both for fertilizer and increasingly as potentual energy storage to go with wind/solar	Green Ammonia Production & Land Use. We support the production and use of green ammonia in Kansas to meet the state's high demand for fertilizer and its

	intermittency. Utilizing renewable wind (or	potential as an energy storage solution
	solar) to produce could make KS a net	for wind and solar power. With proper
	exporter, even with high usage for crops.	legislation, Kansas could become a net
