Climate Adaptation Strategies		✓ locally-specific	✓ Regional
Equity and Community Engagement	Previous climate planning efforts focused more on the economic and environmental pillars of sustainability. Climate plans were led by volunteer steering committees, staff, and community partners. The community provided comments at public meetings.	Equity is a guiding value. The plan acknowledges that climate change affects everyone, but certain populations are at greater risk to climate risks. Engagement with these populations is a high priority. The project budget reflects this, and the majority of the budget will be spent on equitable engagement led by local partners. Summer-Fall 2020	Plan strives for climate solutions that advance equity in the community. Community engagement includes a six-week online community dialogue, May-June 2020 https://climateactionkc.mindmixer.com
