HISTORIC RESOURCES RECONNAISSANCE SURVEY PART OF MARION TOWNSHIP AND WILLOW SPRINGS TOWNSHIP SUMMARY REPORT

September 2018

INTRODUCTION

PURPOSE

A historic preservation survey is the process of identifying and gathering data on a community's historic resources such as buildings, sites, structures, and objects. It consists of two basic components – the field survey, and a project report which describes the process, inventories, and results of the survey.

By producing an inventory of historic resources, surveys provide a valuable community service. Information discovered often provides additional insight into the community's history and the results can be incorporated into their historic preservation plan. Ultimately, the preservation of these cultural resources can improve the quality of life for people in an area by conserving their history for future generations to see, study, and understand.

METHODOLOGY

The Douglas County Heritage Conservation Council (DCHCC) initiated this survey. Review of data entered into the Kansas Historic Resources Inventory (KHRI) as part of the survey was provided by the State Historic Preservation Office (SHPO) at the Kansas Historical Society (KSHS). Conclusions will aid in monitoring and preserving the cultural resources of Marion Township and Willow Springs Township in Douglas County.

Funding for the survey was provided by the Douglas County Heritage Conservation Council. Jan Shupert-Arick, DCHCC's Program Coordinator, supervised the project. Stan Hernly of Hernly Associates, Inc. and Susan Ford of CitySearch Preservation conducted the survey.

This reconnaissance survey of the northern third of Marion Township is intended to be the first step in the survey of the township. Anticipated future work includes reconnaissance survey of the southern two-thirds of the township, and intensive survey of the entire township. Initial properties included in the survey were identified by Douglas County Appraiser staff based on their records for properties that contained buildings with construction dates prior to 1970. Additional properties were identified during the fieldwork and research segments of the survey.

Two public meetings for anyone interested in learning more about the project were held. One was on May 19, 2018 at 10:00 a.m. at the Wakarusa River Valley Heritage Museum, 716 N 1190 Rd, Lawrence, KS. The other was on November 3, 2018 at 2:30 p.m. at Lone Star Lake Community Building, 665 E 665 Rd, Lawrence, KS. Notices were mailed to all survey area property owners and notices were provided to other historical associations including the Clinton Lake Historical Society, the Douglas County Historical Society, and Freedom's Frontier National Heritage Area. At the initial meeting Stan Hernly described the project, and shared maps and lists of properties included in the survey. At the concluding meeting, Stan Hernly presented the findings of the survey.

Research and primary field work, including site visits and photography occurred in June and July 2018. Property data was input and uploaded to in the *Kansas Historic Resources Inventory* (KHRI) data base,

which is maintained by the KSHS, in August 2018. The project report was started in September 2018 and finalized after the second public meeting in October.

Site visits were initiated by the survey team with the properties divided roughly equal between Stan Hernly and Susan Ford. Hernly covered the eastern area of the survey, including the area around Lone Star Lake, and Ford covered the western area. Ford was accompanied by Saundra Tiller (Clinton Lake Historical Society, Board of Directors member) on site surveys, and Linda Faust, Saundra's sister, on some of the site surveys; Saundra and Linda are life-long residents of Marion Township and are very familiar with local history and residents. Most homeowners or residents who were home when site visits were conducted were happy to talk with us and let us take photographs, of at least the exterior, of buildings on their property. If no one was home during the site visits, the surveyors conducted survey work in a limited manner.

Photography was completed using SLR digital cameras. Photos were taken during property visits regardless of weather conditions, sun angle, or vegetation growth around buildings. Photos were renamed for each property and selected ones uploaded into the KHRI database. All photos were provided to the SHPO in original JPG format, reduced size JPG format, and TIFF format.

Research for some specific properties was conducted to more accurately determine significant timeframes. Sources included various maps, publications, and news stories. Sources were located at the Kansas Historical Society, Douglas County Public Works, Spencer Research Library (University of Kansas), and various historic newspapers (accessed through www.newspaperarchives.com). Some oral, photographic, and/or documented information was obtained from homeowners or other individuals present during the site visits. Some of these people were knowledgeable of specific property's histories, and a few had documented historical information regarding properties.

SURVEY PRODUCTS

The products of the survey include:

- This Summary Report
- Site Plan for each property prepared using 2016 photographic satellite imagery from the Douglas County, Kansas, GIS system.
- Photographs of each building, structure, or resource on each property visited. Multiple images from various angles were taken when possible, including orthographic "elevation views". Interior photos of a few properties were taken when the owner granted permission. Select photos were uploaded to the public accessible KHRI database. Photos not uploaded, including interior photos, are on-file at the Douglas County Heritage Conservation Council office and at the KSHS SHPO office, and may be made available upon request to DCHCC or SHPO staff.
- Research documents found for specific properties, specific people, and general information on Marion and Willow Springs township.
- Data uploaded into KHRI files.
- Electronic files of all photos, files, and documents created or found for the survey.

SURVEY AREA

The survey area is 27 square miles, three miles north-south by nine miles east-west. It includes the northern 24 square miles of Marion Township, three miles north-south by eight miles east-west, and three squares miles of Willow Springs township, three miles north-south by one mile east-west.

Douglas County Political Townships

SURVEY PROPERTIES AND RESOURCES

The initial list of properties in the survey area provided by the Douglas County Appraiser's office identified 92 properties containing 107 buildings with estimated construction dates prior to 1970. The final survey included 101 properties and individual KHRI entries for 135 buildings, structures, or resources. 73% of the properties included ancillary structures noted on the primary or secondary KHRI entry for the property, 27% of the properties did not have ancillary structures.

Map of initial properties included in list from Douglas County Appraiser's office

MARION TOWNSHIP CHARACTERISTICS

AREA AND POPULATION DENSITY

Marion Township is located in the southwest corner of Douglas County. It borders Franklin County to the south, Osage County to the west, Clinton Township to the north, and Willow Springs Township to the east. Marion Township is approximately 72 square miles and is the second largest township in Douglas County behind Palmyra Township, which is approximately 80 square miles.

According to the 2010 census, Marion Township had a population of 812 residents, the third lowest population of all townships in Douglas County (excluding urban areas).

The combination of larger land area to lower population means Marion Township has the lowest population density of all townships in Douglas County.

POPULATION DENSITY	Sq Miles	Population	People/SqMiles
Marion Township	71.93	812	11.29
Clinton Township	40.63	586	14.42
Grant Township	16.56	371	22.40
Willow Springs Township	54.55	1,463	26.82
Eudora Township	47.34	1,305	27.57
Kanwaka Township	46.99	1,412	30.05
Palmyra Township	79.93	2,558	32.00
Lecompton Township	35.53	1,707	48.04
Wakarusa Township	46.74	2,318	49.59

HISTORICAL CONTEXT – MARION TOWNSHIP

Marion Township is primarily rural and agricultural in character with no incorporated urban areas. The small community of Lone Star is located in the northeast corner of the survey area. The historic community of Twin Mound was located in the northwest corner of the township within the survey area; the only remaining building of that community is Twin Mound School. The historic community of Globe is located in the township, south of the survey area.

Geographically Marion Township consists of rolling hills, with outcroppings of limestone and shale, and wooded areas along natural drainageways. The survey area (the northern third of the township), is bisected from southwest to northeast in the east portion by Washington Creek and in the west portion by Rock Creek, both of which flow north-northeast. Just north of Marion Township, Rock Creek flows into Clinton Lake, a United States Army Corps of Engineers reservoir built in the late 1970's. Washington Creek, in the southeast portion of the survey area, was dammed in the late 1930's southwest of the community of Lone Star to create Lone Star Lake.

Lone Star Lake is a significant geographic and historic feature in the survey area. It was constructed by the Civilian Conservation Corps beginning in 1934 and finishing in 1939. As part of the project, approximately 78 private lots were sold off around the southwest leg of the lake to raise funds for materials used in constructing the dam and creating the lake.

Development of Marion Township followed the standard pattern of Section and Range land partitioning. Primary roads generally fall on mile or half-mile grid lines, with some exceptions around natural features like Lone Star Lake, Washington Creek, and Rock Creek. However, spacing of roads is typically greater than 1-mile in the middle and western portion of the area. U.S. Highway 56 cuts east-west across the township three miles south of the survey area.

PATTERNS OF DEVELOPMENT: FARMSTEADS, SMALL COMMUNITY, AND LAKESIDE CABINS

Farmsteads

Farmsteads were the backbone of settlement and development in rural Douglas County, Kansas. They were the economic driver. They were the nuclei of family life and activity. They were knitted together by social and economic interaction that blended together a cohesive amalgam that moves and changes through time to create a built environment that reflects the cultural values and resources of the people who built and modified them. What we see today is a snapshot of the current status of a cultural system moving through time.

The organization and role of farmsteads changed as farm work became mechanized in the late 19th century and continued through the 20th century. Life on the previously semi-isolated farm became less isolated as modes of transportation changed from horse-drawn wagon and buggy to automobiles and farm trucks. Fewer people were required to work on a farmstead and the number of children in farm families declined. Farmers would work land they owned, and would rent land if their farming capacity exceeded what they could purchase.

Many farmsteads prospered, some managed on an even keel, and others decline over time. What we see in the rural landscape today are the remains of those farmsteads. Some still meet the definition of "Farmstead", others have been reduced to two or three buildings, and some are lone structures acting as a marker of a bygone era.

Just as farmsteads have changed in the past they will continue to change in the future. The effect of that change is the same in both cases, some farm related buildings will be lost, some will be maintained in a status quo situation, some new ones will be added, and some will be rehabilitated and used for their original purpose or repurposed for other uses.

The Farmstead, as the basic building block of development, is the rural resource that should be a basis of conservation and preservation planning in the county. Farmsteads tell a more complete story about rural heritage than any number of single individual buildings can tell. A historic barn, sitting by itself, can be significant, but it does not provide a very complete picture of history because it has lost its context.

As part of this survey, various types of farmsteads and farmstead remnants were found, including:

- Farmsteads still occupied by descendants of original settlers
- Farmsteads still owned by descendants of original owners but lived on by renters
- Farmsteads that were unoccupied and unused, or only partially used
- Farmsteads that were owned by people with no connection to original owners
- Farmsteads that had no farmhouses but were still functioning farms
- Groups of buildings that had previously been part of a farmstead
- Individual buildings that were the last remnants of a farmstead

Small Community

A common trait in rural areas of Kansas was the development of small communities established to provide centralized nodes for commercial and social activities. These provided opportunities for town and country folks to connect through business transactions, church functions, and school activities.

The small unincorporated community of Lone Star, located in the northeast corner of the survey area, provided this nodal function. It's heyday of growth and activity peaked in the early 20th century, and its commercial and social prominence waned as communication and transportation services allowed faster and better connection with larger nearby communities of Lawrence, Baldwin City, Topeka, and Ottawa. In the 1920's there was a store, a bank, a church, a school, a telephone company switchboard building, a community hall, and several other commercial buildings and residences in the town. Today, only the church retains its original use, while all others have either been demolished or converted to other residentially associated uses.

Lakeside Cabins

The Civilian Conservation Corps was established in 1933 to provide employment opportunities for male U.S. citizens between the ages of 17 and 23.5 as response to the Great Depression. During its nine-years of operation the program employed approximately three million young men working on forest management, flood control, conservation, and state/national park projects.¹ A proposal to construct a dam and create a 150-acre lake southwest of the town of Lone Star in Douglas County, Kansas, was selected in the summer of 1934 as a CCC project.

CCC projects maximized labor and minimized expenses for materials and equipment. For the Lone Star Lake project, labor, in the form of two CCC camps with approximately 400 total workers provided the muscle, while 100 shoreline lots were planned on the southwest leg of the lake and sold to raise funds for purchasing materials and property for the lake's construction.² Construction of the CCC camp began in September 1934. Construction on the dam and lake facilities began in October 1934 and stretched to October 1939. The lake was completed, stocked with fish, and is owned and maintained by Douglas County.

Construction of lake side cabins appears to have begun concurrent with or soon after completion of the lake. A "Lone Star Park Lots" map from 1957 identifies the owners of 78 private lots on 8 tracts, with

¹ <https://www.nps.gov/thro/learn/historyculture/civilian-conservation-corps.htm>

² "Will Sell Lone Star Lake Lots". Lawrence Daily Journal-World, July 25, 1934. pp 1.

cabins/dwellings shown on 35 lots. Current (2018) Douglas County appraiser maps identify 70 lots as private property, with 55 lake side cabins around Lone Star Lake. Twenty-nine properties were identified as having cabins that are likely 50-years-old or more, and were surveyed as part of this project.

SURVEY FINDINGS

The three distinct patterns of development within the survey area, Farmsteads, Small Community, and Lakeside Cabins, create separate and unique identities within the survey area. Each of those identities form a semi-cohesive group of resources.

The farmsteads are similar in character to farmsteads found throughout other areas of the county, and reflect the working life of farming and farmers. The primary source for studying and understanding rural properties in Kansas is the ***National Register of Historic Places Multiple Property Documentation Form (MPDF): Historic Agriculture-Related Resources of Kansas***. Using the MPDF as a guide, the survey work of the farmsteads was approached not on an “individual building” basis but on a property basis. Farmstead properties in the survey were reviewed based on the three potential historic register listing categories for farm properties. These are:

1. **Farmstead**: This consists of at least four associated historic agriculture-related structures on a property, including a barn and at least three other structures, one of which may be (but is not required to be) a farmhouse.
2. **Associated Grouping**: This is one or more primary farm structures and one or more secondary farm buildings or resources on a property.
3. **Primary Farm Structure**: These are Barns, Corncribs, Granaries and Farmhouses. Of these, Barns, Corncribs, and Granaries are eligible for individual historic listing under the Historic Agriculture-Related Resources of Kansas MPDF. Farmhouses are not eligible to be individually listed under the MPDF, but may be eligible for historic listing based on architectural significance or association with a person.

The general layout of the community of Lone Star followed two roads, E 800 running north-south along the east edge and N 661 Diagonal Rd running southwest-northeast through the middle of town. The diagonal road follows an alignment established early in the county's history along the north side of Washington Creek. The town now consists of single-family dwellings that fall within the typical pattern of residential forms and styles common in this area of the country. Except for The Church of the Brethren at 883 E 800 Rd, the commercial and institutional buildings that had been in the town have either been demolished or converted to other uses. The former ca. 1895 Lone Star School No. 47 at 880 E 800 is now a dwelling, the former 1910 Lone Star Bank at 894 E 661 Diagonal Rd has been converted to a garage, and the former Lone Star Store at the NW corner of the intersection of E 800 and N 661 Diagonal Rd has been demolished.

The development of lakeside cabins typically only included a single cabin dwelling on a single lot, occasionally with a small storage shed, and typically with a large deck attached to the lake facing side of the cabin and a boat dock in the lake. The styles of the cabins generally follow residential styles popular at the time of their construction. The lakeside cabins are typically “second homes” not lived in year-round, and reflect the leisure life of fishing, relaxation, and escape from income-producing work. The size of the cabins typically is smaller than in-town or farmstead “full-time” dwellings.

HISTORIC RESOURCES ANALYSIS

HISTORIC RESOURCES SURVEYED

A total of 101 properties were surveyed and 135 historic resources were documented and uploaded as separate entries into the KHRI data base. The location of historic resources by township in the survey area were:

Marion Township	128	94.81%
Willow Springs Township	7	5.19%
	135	100.00%

The 135 surveyed resources had historic uses of:

Agriculture/Subsistence – Agricultural Field	1	0.74%
Agriculture/Subsistence – Agricultural Outbuilding	30	22.22%
Agriculture/Subsistence – Animal Facility	2	1.48%
Agriculture/Subsistence – Processing	2	1.48%
Agriculture/Subsistence - Storage	2	1.48%
Commerce/Trade – Business	1	0.74%
Commerce/Trade – financial Institution	1	0.74%
Domestic – Camp	28	20.74%
Domestic – Institutional Housing	1	0.74%
Domestic – Secondary Structure	3	2.22%
Domestic – Single Dwelling	54	40.00%
Education – School	3	2.22%
Funerary – Cemetery	3	2.22%
Recreation and Culture – Outdoor Recreation	1	0.74%
Religion – Religious Facility	2	1.48%
Transportation – Road-Related (Vehicular)	1	0.74%
	135	100.00%

As part of the survey work, site plans were prepared for all properties. Also, historic research was conducted for some properties to better determine their significance.

RESOURCE TYPES – FARM VS NON-FARM

Historic resources in the survey area are comprised of a mix of farm related and non-farm related resources. Comparatively speaking, due to the presence of Lone Star Lake cabins and buildings in the community of Lone Star, this survey area has more non-farm related resources than other areas previously surveyed in the county. Of the resources in the survey area 81 out of the 135 are “Farm Related” and 54 are “Non-Farm Related”. The farm related resources include Primary Farm Structures, such as barns, corncribs, granaries, and farmhouses; and Secondary Farm Structures and Features, such as poultry houses, outhouses, fences, windmills, etc.

Farm Related (incl farm houses)	81	60.00%
Non-Farm Related	54	40.00%
	135	100.00%

PROPERTY TYPES - GENERAL

Properties in the survey area can be categorized into four groups: Farm Properties, Lone Star Properties, Lone Star Lake Properties, and Other. Of the 101 properties surveyed the breakout between those groups is:

Farm Properties	53	52.48%
Lone Star Properties	10	9.90%
Lone Star Lake Properties	31	30.69%
Other Properties	7	6.93%
	101	100.00%

PROPERTY TYPES – FARMS

The 53 farm related properties in the survey area each had at least one resource, and most had multiple resources. The mix of historic and non-historic resources on individual properties varied widely, making it difficult generalize and categorize the farm properties. Some properties had a historic barn and modern house, some had a historic house and modern barn and/or outbuildings. Many had historic resources that were altered by additions or changes in exterior finish materials and components.

PROPERTY TYPES – LONE STAR

Nine of the ten properties surveyed in the community of Lone Star had residential related resources (dwellings, garages, sheds, etc). The only non-residential related property was the Lone Star Church of the Brethren.

PROPERTY TYPES – LONE STAR LAKE

Of the 31 properties related to Lone Star Lake in the survey, 29 were properties containing a cabin, one was the lake itself and associated resources, and one was the CCC camp site and associated resources. Some of the cabin properties contained small secondary shed structures. The Lone Star Lake property contained multiple resources including the dam, dam road, concrete guard wall along south side of the dam, concrete pilasters along the north side of the dam, concrete picnic tables, picnic shelter, and Lone Star Park Bridge No. 2.

PROPERTY TYPES – OTHER

The seven properties classified as “other” included two schools (Twin Mound School and Colyer School No. 42), one church (Washington Creek Church), three cemeteries (Washington Creek Cemetery, Rock Creek Cemetery, and Twin Mound Cemetery), and one cabin not associated with Lone Star Lake.

POTENTIAL HISTORIC LISTING ANALYSIS

A reconnaissance survey of this type can be used to generate a preliminary list of potential historic resources in the survey area. Staff at the State Historic Preservation Office (SHPO) has reviewed the uploaded survey entries and provided feedback on potential eligibility of properties and resources for historic listing. Additional Intensive Survey is recommended for 46 of the 101 surveyed properties; a list of these is included in Appendix A.

		Properties recommended for Intensive Survey	
Farm Properties	53	22	41.51%
Lone Star Properties	10	2	20.00%
Individual Properties	7	5	71.43%
Lone Star Lake Properties	31	18	58.06%
	101	47	46.53%

POTENTIAL HISTORIC LISTING – FARM PROPERTIES

FARMSTEADS

A Farmstead consist of at least four associated historic agriculture-related structures on a property, including a barn and at least three other structures, one of which may be (but is not required to be) a farmhouse. There are many farms in the survey area, but only five meet the formal definition of a historic “farmstead”. One of those, the John and Anna O’Sullivan Farmstead, at 710 E 100 Rd is listed in the National Register of Historic Places and was not included in this survey. The other four farms likely meeting the definition of a Farmstead that is potentially eligible for historic listing are:

Garst Farmstead – 314 N 600 Rd	
	
Site Plan	Barn
	
House	Shed & Barn

Metsker Farmstead – 625 N 775 Rd

Site Plan

Barn

House

Shed

Spring Lake Farm – 619 E 715 Rd	
	
Site Plan	Barn
	
House(not eligible due to siding & windows)& Shed	Other Buildings/Structures

Flory Farmstead – 892 E 800 Rd	
	
Site Plan	Barn
	
House	Other Buildings/Structures

ASSOCIATED GROUPING OF FARM-RELATED STRUCTURES

There are nine farms in the survey area that likely meet the MPDF definition of “Associated Grouping of Farm-Related Structures”. This is one or more primary farm structure and one or more secondary farm building or resource on a property. These properties are:

Sullivan Farm – 661 E 100 Rd	
	
Barn	House
Hiatt Farm – 830 E 100 Rd	
	
Barn 1	Barn 2
Maichel Farm – 66 N 600 Rd	
	
Barn	House

Hatcher Farm – 721 E 250 Rd	
	
Barn	House

Wheeler Farm – 809 E 661 Diagonal Rd	
	
Barn	Other Buildings

Flory Farm – 873 E 750 Rd	
	
Barn	House

Nieder Farm – 882 E 850 Rd	
	
Other Buildings	House
Watt Farm – 849 N 875 Rd	
	
House	Garage & Shed

FARM-RELATED STRUCTURES

The MPDF: *Historic Agriculture-Related Resources of Kansas* defines three types of farm-related structures. These are:

- Primary Farm Structures
- Secondary Farm Structures
- Other Farm-Related Structures

PRIMARY FARM STRUCTURES

Primary Farm Structures are buildings that were essential to the farming operations of a farmstead. These include:

- Barns
- Corncribs
- Granaries

- Farmhouses

Barns

The MPDF describes eight types of barns found in Kansas. These are: Bank Barn, Gable-Roof Barn, Gambrel-Roof Barn, Arch-Roof Barn, Polygonal/Round Barn, Midwest Prairie Barn, Kansas Vernacular Barn, and Other Barn. Of these, the most commonly found barns in the survey are:

- Gable-Roof Barn
- Midwest Prairie Barn
- Gambrel-Roof Barn

There are four properties with a single Primary Farm Structure potentially eligible for historic listing. These are:

Thurber Barn – 855 E 200 Rd  Midwest Prairie Barn	McKinzie Barn 1 – 214 N 800 Rd  Gable Roof Barn
Calwell Barn – 776 E 250 Rd  Gable Roof Barn	Russell Barn – 681 E 300 Rd  Gable Roof Barn

Granaries

Only one granary was observed in the survey area, and it is part of a Farmstead or Associated Grouping of Farm-Related Buildings. Because of their small size and having raised-off-the-ground rectangular grain storage bin/s, they tend to not be easily adapted to new uses. Because of this, they tend to be an endangered building type.

Spring Lake Farm – 619 E 715 Rd	
	
Granary	

Farmhouses

The MPDF defines Farmhouses as Primary Farm Structures, and there are special considerations for potential historic listing related to them. These are:

- A farmhouse is not required for a property to be considered for historic listing as a Farmstead
- A farmhouse is not required for a property to be considered for historic listing as an Associated Grouping
- A farmhouse cannot be considered for individual historic listing as a Primary Farm Structure
- A farmhouse that meets the National Register Criteria for Evaluation can be considered for individual historic listing

Most of the Farmhouses in the survey area were grouped with other farm-related structures and were included in either a Farmstead or Associated Grouping of Farm-Related Structures above. Properties where there was a Farmhouse without other potential historic farm-related structures include:

643 E 550 Rd	Shively House – 823 E 550 Rd
	
Ranch – 1963 est.	Italianate – 1872/1908 est.

839 N 900 Rd	
	
Ranch – 1966 est.	

SECONDARY FARM STRUCTURES

Secondary Farm Structures and Features include:

- Poultry Houses
- Milkhouses
- Milk Barns/Sheds
- Loafing Sheds
- Pole Barns
- Boxcar Barns/Sheds
- Springhouses
- Washhouses
- Tankhouses
- Storm cellars/Root Cellars
- Summer Kitchens
- Smokehouses
- Outhouses
- Silos
- Windmills
- Fencing

There are many examples of secondary farm structures and features throughout the survey area. These were identified and included in the KHRI entries for the primary farm structures on the property. They were not typically photographed individually for this survey and would be documented in more detail as part of a future Intensive Survey of properties.

POTENTIAL HISTORIC LISTING - LONE STAR PROPERTIES

Two of the ten properties surveyed in the community of Lone Star were identified as having buildings potentially eligible for historic listing. These were:

Flory Property – 888 E 661 Diag Rd	
	
House - Dutch Colonial Revival – 1902 est.	Garage – 1915 est.
894 E 661 Diagonal Rd	
	
House – Craftsman/Bungalow – 1915 est.	

POTENTIAL HISTORIC LISTING - INDIVIDUAL RESOURCES

Five properties were surveyed and identified as having resources potentially eligible for historic listing. These five properties and resources are:

Twin Mound School – N 825 Rd	Twin Mound Cemetery – 898 E 100 Rd
	
Vernacular - 1880	1858 (Kansas eligible only)
Smith Cabin – 237 N 851 Rd	Colyer School No. 42 – 796 N 600 Rd
	
Minimal Traditional – 1930 est.	Vernacular - 1896 (Kansas eligible only)
Lone Star Cheese Factory 882 E 661 Diagonal Rd	
	
Vernacular – 1920 est	

POTENTIAL HISTORIC LISTING - LONE STAR LAKE ASSOCIATED RESOURCES

Many historic resources associated with Lone Star Lake were identified, surveyed, and determined to be potentially eligible for historic listing either individually or as part of a historic district. These fall into three categories:

- Lone Star Lake Civilian Conservation Corps Camp Resources
- Lone Star Lake and Lone Star Park Resources
- Lone Star Lake Private Cabins

Lone Star Lake – Location of Potential NR Historic Resources (green stars)

CIVILIAN CONSERVATION CORPS CAMP RESOURCES

The CCC Camp to house workers constructing the Lone Star Lake dam, bridges, roads, and other structures was set up in September 1934 and was utilized until October 1939. When the camp was abandoned, the wood-framed buildings were dismantled and materials taken for use at other CCC project locations. Building elements and structures constructed of masonry were left in place and were incorporated into the subsequent use of the site as a park campground.

Remaining CCC Camp Resources at the Lone Star Park Campground include:

Stone Steps

Concrete Picnic Tables (5 total)

Stone Water Tower

LONE STAR LAKE AND LONE STAR PARK RESOURCES

There are multiple historic resources associated with Lone Star Lake and the surrounding Lone Star Park. The resources include:

Concrete Pilasters North Side of Dam**Maintenance Building – 1966 est.****Conc Picnic Table w/ Orig Conc Bench****Picnic Shelter – 1966 est.****Concrete Culvert****Lone Star Park Bridge No. 2**

LONE STAR LAKE PRIVATE CABIN RESOURCES

Currently there are approximately 55 lots at Lone Star Lake with cabins constructed on them. The survey identified 16 cabins as being potentially eligible for National Register listing as part of a historic district that could include the lake, the CCC camp site, and their associated resources. Given the natural terrain around the lake and the division of lots into separate tracts with open space between them, it may be possible to define a potential historic district where the percentage of potential contributing cabins is approximately 57% of the cabins within the district.

Lone Star Lake - All Properties with a Cabin/House	55	
Lone Star Lake - Cabins potentially NR District Eligible	16	29.09%

Lone Star Lake - Properties in limited potential NR District with a Cabin/House	28	
Lone Star Lake - Cabins potentially NR Dist Eligible	16	57.14%

Also, given the area of Lone Star Lake and its surrounding park with many historic resources, the percentage of property area with non-contributing resources within a potential historic district would be extremely low, even if all of the cabin properties were included.

The 16 cabins potentially eligible for historic listing include:

620 E 582 Rd  Ranch – 1960 est.	622 E 582 Rd  Modern – 1953 est.
626 E 582 Rd  Vernacular – 1950 est.	646 E 582 Rd  Ranch – 1960 est.

631 E 593 Rd

Minimal Traditional – 1950 est.

CONCLUSION

The 27 square mile area covered by this reconnaissance survey represents a unique area of Douglas County. The construction of Lone Star Lake in the late 1930's spurred a type of development not common in the county, private cabins on a public man-made lake. The primary goal of the survey was to identify and gather preliminary documentation on properties in the survey area and identify potential historic resources. The next step should be further study of the identified properties by completion of an Intensive Survey.

It has been a pleasure working on this survey, and we hope that the final outcome proves to be of great use to the Douglas County Heritage Conservation Council. On behalf of the survey team, thank you for this opportunity to add to the cultural heritage of Douglas County, Kansas.

Stan Hernly, AIA
Survey Team Coordinator
