Adult CC Criminal History Score

When sentencing is determined for a felony offense, a person is given a score based on his/her prior criminal history and convictions. The scores range from A, the most severe with three or more prior person felonies, to I, the least severe having one prior misdemeanor or no record. That letter score, combined with the level of current charge, will determine the amount of sentence time a person receives along with the length of probation and post release supervision that is given.
